TITLE : CONTENT SEARCH SYSTEM AND
COLLECTION AND CONTROL SYSTEM
FOR CONTENT SEARCH DATA

ABSTRACT : PROBLEM TO BE SOLVED: To provide a content search system which searches the content software by using sensitive key words.

SOLUTION: A content search database 3 and a network client 8 that is used by a search user for searching the content software on a network are connected in a network. In the content search database 3, the classification/ grading of the content software are performed by means of objective key words, such as work profile items of work titles and performers, situation items of countries being the stages, and subject items of a subject of friendship, family, love, etc., and the sensitive key words, such as audio-visual sense items of crying for joy and being relaxed heartily, work taste items of dynamic, cool, etc., and production element items of being classified in story development. Also, the search user searches the desired content software on the Web by using the objective key words and/or the sensitive key words.
